hybo

Case study

raona
coding corporate futures

Raona is an IT consultancy that was founded in 2003. They define themselves as "technological explorers" and their aim is to look for the latest solutions and trends to always be one step ahead. The company shares its passion for technology without fear of innovation and wants to carry out projects that surprise and inspire its clients.

Hybo Challenge

Raona, given the service it offers, decided to convert some of its workstations from face-to-face to hybrid. For a good management of the spaces, it decided to add a space booking and management service through modules. They decided on hybo because of the possibility of contracting only the necessary modules and the ease of use of the application.

Needs
Raona

For better workspace management given the new implementation of hybrid workstations, Raona required the following modules from Hybo:

- Booking and management **module for desks and work tables.**

- Meeting room booking and **management** module.

- Parking space booking and **management** module.

Challenge

Add Hybo in Raona's management tools to make it easy for hybrid workstations to book their corporate spaces.

Requirements

- Being able to access the application from a mobile phone or web browser.

- The application should be multilingual in English and Spanish.

- Each user's information will be available from the **profile** page.

- The parking modules will have standard functionality and can be booked according to vehicle and working day. Users can have one or more cars in their profile.

- Desk and room modules with standard functionality, applying daily, periodical or recurring booking.

- That users can release a booking, whether it is a parking, desk or room booking from the application. The space remains available for the rest of the users.

- Administrators will have an administration module where they will be able to configure the different modules, offices, areas and parking spaces, desks, etc.

Solution

After 30 days of testing the Hybo app, Raona decided to implement it on 24 May 2021. The app is currently used by 100 employees in hybrid mode. In addition to metrics such as how much space employees have, Raona can meet health and safety standards.

1 Desks booking

The booking of desks on the map is integrated with the link to Outlook. In addition, the check-in or release in case of cancellation is carried out.

2 Rooms booking

Room bookings linked to Outlook with choice of capacity and timetable. In addition, check-in or release in case of cancellation.

3 **Parkings booking**

By means of the vehicles added for each user, parking can be booked according to vehicle and working day.

Opinions

Patricia Villanova.
HR DIRECTOR

"

With Hybo we adapt the office to our new needs in an agile and digital way, being able to book desks, booking parking spaces, among others, with just one click, facilitating the day-to-day work of our employees.
